

GS Sample for Australia

- **Current Circumstances**

My name is Yash S [REDACTED], and I am applying for a Bachelor's in Information Technology from Griffith University. I have completed a Diploma in Information Technology and several internships in the tech domain. To further gain knowledge, I have decided to pursue this program. My parents have been very supportive of this decision. My parents and my maternal grandfather will be funding my education with their earnings and savings. To ensure that there's a lesser financial burden on them, I have also secured a loan of INR [REDACTED]. My father is a [REDACTED] who earns an annual income of INR [REDACTED], and my mother is an entrepreneur also, earning INR [REDACTED]. My maternal grandfather earns his income of INR [REDACTED] through agriculture. My parents have savings worth INR [REDACTED], and a total net worth of INR [REDACTED].

- **Why Australia and Griffith University?**

Australia was one of the top contenders when I decided to pursue my educational pursuits overseas. This is because the nation is renowned for providing globally recognised degrees. However, what is more beneficial is the combination of practical learning opportunities and industrial exposure provided by the nation. There are similar programs in India, but the emphasis on rote learning and lack of practical learning deterred me. I researched different universities but found Griffith University's program to be the best. Griffith University's Information Technology (IT) program stood out to me because of the excellent curriculum it has. The program has several specialisations, and the one I align with most is Networks and Cybersecurity. Course modules such as Data Management, Application Systems and [REDACTED] Computer Networking Essentials fascinated me immensely. Griffith University is one of the top 2% of universities in the world. I will be able to learn from industry experts.

- **Future Benefits of this Program**

Completing this program would help position me as an experienced individual in the industry. I plan to pursue the role of a Security Analyst or Cybersecurity Consultant. As a Cybersecurity Consultant, I would apply the skills I learned from this program towards ensuring the security and integrity of information systems for the organization I work for. I want to work for prominent organizations such as Wipro, Accenture, Google, and Amazon. I would be able to earn a salary between INR 12- INR 15 lakhs per year. As I
